

Technical Interview Task
(SerAlard)
InterShip & Students Level

Firstly: Problem Solving

Return the array of Odd Numbers from other array

Create a function that takes one array as arguments and returns all Odd numbers from.

Examples

```
OddFunction([1,2,3,4,5,6,7,8,9]) → [1,3,5,7,9]
```

Notes

- Don't forget to `return` the result.
- If you get stuck on a challenge, find help in the Resources tab.
- If you're *really* stuck, unlock solutions in the Solutions tab.

you can use any programming language to solve it like (JS, Java, C#, C++, Go, Python etc.)

Secondly: in JS or react make a get request to get first 5 users only data
<https://jsonplaceholder.typicode.com/users>

Your can share your solve by GITHUB or by Google Drive file
